
Ritherdon MediBox

The Ritherdon MediBox is intended for use in nursing and residential care homes, hospitals and schools as a means of safe storage for medicines.

The cabinet is sturdily manufactured from 1.2mm thick mild steel, and is attractively powder painted white for added durability.

There are two adjustable shelves within the unit and the door opens downwards to form a useful dispensing surface.

The MediBox is easily and securely fitted to a flat surface by means of four fixing holes. Only basic DIY skills are necessary!

A cam lock with removable key ensures security.

A full specification is given overleaf.
