## R27 Replacement Door & Frame

---

The Ritherdon R27 replacement door and frame is designed for use on steel electricity meter back boxes of either “Mantel” or “Clifton” designs, as commonly used in high and medium rise social housing.

The unit is fabricated from a commercial grade stainless steel and

powder coated white to provide an attractive but durable finish.

The R27 is designed for quick and easy installation on to an existing back box, which is approximately 400 mm wide (15  $\frac{3}{4}$ ”) x 795 mm high (31  $\frac{1}{4}$ ”).

After successfully completing the repair, access to the electricity meter is gained by using a standard triangular key to operate the slam lock.
