

Void Property Meter Box Products

Unoccupied properties (voids) often become targets for opportunistic vandalism and theft. On top of the financial cost, this can create a hazard to the public if electricity or gas supplies are left exposed.

Fortunately since the utility companies don't need regular access to meter boxes on void properties, it is temporarily possible to increase the box security above the standard, tri-key-operated lock.

For this reason, we have added two new products and an extra option to our domestic metering range:

Void Box Cover Plate

Void Box Locking Assembly*

Extra Locks Option

Void Box Cover Plate

A strengthened galvanised or stainless steel plate which is fixed to the wall, covering and protecting virtually all of the meter box.

- Highly vandal resistant
- Suitable for any meter box, including those without Ritherdon door and frame units
- Fixing holes spaced and slotted to fit plugs and screws between bricks
- Easy to use again once the property is no longer void
- Supplied with a plain metal finish, or painted if the plate needs to be more discreet

Void Box Locking Assembly*

Two brackets fit through the gap around the meter box door to hook onto the inside of the frame. The locking plate slides into the brackets, covering the existing lock and the opening edge of the door, and allowing a padlock to be fitted. The assembly is fabricated from powder coated stainless steel, to a robust design to resist prising.

- Adds two more fastening points, making the door fixing much stronger
- Enables the fitting of a padlock to the meter box door
- Easy to remove for access to the meter box during refurbishment work
- Visually more discreet than a full plate
- Fits the full range of Ritherdon meter box door and frame units
- The assembly can be re-used many times over on different sites

*patent pending

Extra Locks Option

Two extra locks fitted to a Ritherdon door and frame unit. These are a more secure design than the simple tri-key operated lock and can be used while a property is void.

- Just like the two other void products, this option is available for our whole range
- The meter box remains easily accessible during refurbishment work on the property
- The most discreet of the three options, with the meter box looking no different when the property is unoccupied

Please contact us to discuss these and any other solutions for your void properties
